WhamBAM TSR-G Cleaner

Product Usage, Application and Advantages

**Neutral pH - Non-Hazardous - Non-Corroding
Safe, Superior Cleaning Strength!**

Description: WhamBAM TSR-G Cleaner was specifically formulated to address the needs of the vehicle owner or professional detailer to provide a safe alternative to the use of hazardous solvent-based and corrosive alkaline-based cleaners. WhamBAM TSR-G Cleaner is water-based and highly concentrated for versatility and cost-effectiveness in any vehicle surface maintenance situation. It can be applied in any manner - spray, brush, wipe, power washer, etc. - and can be diluted with water by as much as 80:1 for routine cleaning in commercial application. For first time usage a 1:1 to 10:1 mix is a good starting point. When applied to a surface treated with WhamBAM DETAILER, a dilution up to 30:1 or more is effective.

Thank You Ma'am!

Experiment until you arrive at a dilution that is satisfactory in the blend of economy (more water, less cleaner) and speed (more cleaner, less water). You may well have several dilution ratios for different jobs. Stubborn stains are dissolved almost on contact using full strength TSR-G Cleaner, making it perfect for keeping troublesome hard to clean areas such as engines and wheel well areas in like new condition.

When used to remove concealing grime and petroleum-based residues from the engine area, TSR-G Cleaner makes it possible to perform a more thorough cleaning/degreasing. It is an excellent way to clean out the exhaust mess from gas and diesel engine compartments on motorhomes, buses, boats, aircraft etc. It dissolves fuel spills and exhaust coating on contact. YOU MAY ALSO USE TSR-G Cleaner IN WATER TO WASH. JUSTPOUR 4 to 6 OZ. IN A BUCKET OF WATER, MIX AND WASH WITH A MICROFIBER CLOTH OR MITT! In addition, environmentally-safe TSR-G Cleaner can be stored and used anywhere. TSR-G Cleaner is far superior to all other general surface cleaners in every way. Its cleaning performance is guaranteed! Dry with WhamBAM microfiber cloth for best results.

Cost-effective Solvent Replacement!

Benefits/Advantages

- Superior cleaning strength - Can be safely stored anywhere.
- Concentrated for versatility and usability.
- Non-dulling; no alkaline soaps or mineral acids.
- Surface safe chemistry - Water-based; neutral pH.
- Biodegradable and environmentally safe.
- Cost-effective replacement for highly flammable solvents.
- Safely removes all dirt, grime, and petroleum-based residues.
- For general vehicle surface cleaning - cannot harm any surface.

Uses

Primary - oil films, grease, carbon residues, exhaust, brake dust, bugs, and road grime.

Secondary - vehicle engine areas, wheel wells, RV's, boats, buses, motorcycles, golf cars, outside surfaces of vehicles, wheels.

Directions for Use:

Spray area to be cleaned; let soak up to one minute; rinse with water. First time users may find a small amount of grime left on the surface in some areas after rinsing. This is caused by an electrostatic bonding between the grime and surface (that's what holds dirt on the surface in defiance of gravity). While the area is wet just wipe clean with a cloth. To weaken or eliminate that bonding in the future apply products such as WhamBAM Protective Polish and/or WhamBAM SPRAY DETAILER to entire surface when dry. The next time you clean virtually everything will come off and you can dilute TSR-G Cleaner even more. It will not remove those coatings or any quality polish. For tar and heavy grease, before rinsing, massage area with cloth or finger to loosen it up, and then rinse.

Guaranteed

WhamBAM TSR-G Cleaner has a full customer satisfaction guarantee!
